

### Lesson 3. Planting

Question: How does planting during different Moon phases affect plant growth.

Experiment: Planting According to the Moon Calendar

#### Materials

- Moon Journal
- Seeds
- Ruler

#### Procedure

Using your knowledge of the Moon phases, plant two of the same crop, in the same planter box, at different times. One should be planted during a Moon phase that benefits plant growth and the other during a phase that hinders plant growth. Monitor your plant for a month and use your Moon journal to take notes on their growth progress. At the end of the month, compare the growth of the two plants. Be sure to use the same methods when planting and watering your plant.
